

J-22 HAND PRESS

J-22 Cut & Set Hand Press

The J-22 is an entry level hand press that is easy to use and unlike many other hand presses will punch a hole and set a grommet in one stroke in very challenging material. Due to the unique die set that this press uses, it will make its own hole with no distortion of your material and set the grommet and washer cleanly in one motion. The J-22 is manufactured in Spain by the JoPevi Company with the highest quality components and uses the same die set arrangements that the fully automatic grommet setting machines use. The J-22 is portable and lightweight but strong enough to tackle the toughest material like nylon webbing and seat belt material. The setting dies are easily changed and adjusted, making the machine extremely user friendly and capable of setting many sizes and types of grommets and washers.

Size Capacity: #00 3/16 inch Plain Sheet Metal Grommet to a #4 Plain Sheet Metal Grommet 1/2 inch hole diameter

Dimensions: Height: 12.5 inches. Width 3.5 inches, Deep: 12 inches
Throat Depth: 3.25 inches
