

MODEL B SINGLE FEED EYELET MACHINE

Model B / USM B Single Feed Electric Eyelet Setting Machine

The Model B is a standard duty, single revolution electric eyelet setting machine best suited for smaller eyelets in applications that are pre-punched (meaning there is already a hole in the material). The machine is a single feed machine which does not feed a washer. If your application requires a washer, it can be hand feed onto the bottom die. The throat depth on the machine is 7 inches making it ideal for pinwheel applications as well as knife sheaths and tydex holsters. Like all auto feed eyelet machines, the Model B is set up to run one barrel diameter size eyelet only. Different lengths of the same size barrel diameter eyelets will feed in this machine.

Size Capacity: 1/8 inch to 1/4 inch eyelets

Advantages: Quick activation and built for high production runs.

Maintenance: Lubrication with 30wt motor oil before use is recommended

Optional Equipment:
