

MODEL G SINGLE FEED EYELET MACHINE

Model G / USM G Single Feed Electric Eyelet / Grommet Setting Machine

The Model G is a standard duty, single revolution electric eyelet / grommet setting machine best suited for smaller eyelets and grommets in applications that are pre-punched (meaning there is already a hole in the material). The machine is a single feed machine which does not feed a washer. If your application requires a washer, it can be hand feed onto the bottom die. The throat depth on the Model G is 4.75 inches. Like all auto feed eyelet machines, the Model G is set up to run one barrel diameter size eyelet only. Different lengths of the same size barrel diameter eyelets will feed in this machine. Additional eyelet feeders can be purchased to change eyelet sizes quickly and easily making this machine very versatile. A heavy duty machine stand is standard.

Size Capacity: 1/8 inch eyelet to #0 grommets

Advantages: Quick activation and built for high production runs.

Maintenance: Lubrication with 30wt motor oil before use is recommended

Optional Equipment:

- * Interchangeable raceways to run different sizes
